ESTEBAN FLORES PIZARRO

Programmer Analyst · Web and Software Development

Santiago, Chile · esteban.flores.dio@gmail.com
Portfolio: bandiohgames.github.io/web · github.com/BandiohGames · linkedin.com/in/esteban-flores-pizarro

PROFILE

Programmer analyst (INACAP) focused on delivering working products end to end. I built FitTracker, a complete web app with a Google Apps Script backend and a responsive frontend, and the HubLab meeting-minutes module during my internship, where I also led the team. As an independent developer I shipped **REZAGO**, desktop software in 8 languages for Windows and Mac, with automated testing, packaging and release. I use AI-assisted programming (Claude Code) with my own review and testing.

PROJECTS

FitTracker — training and nutrition web app · *JavaScript · Google Apps Script · Google Sheets* — In development

- Built a complete web app: Google Apps Script backend with a 9-sheet Google Sheets database (40+ server functions and caching to speed up reads) and a responsive JavaScript, HTML and CSS frontend.
- Implemented weekly planning, set logging, nutrition, body weight and equipment tracking, with history, canvas charts, streaks and achievements.
- Programmed automatic load progression by exercise type, visual themes and an offline mode with cached data; ~7,400 lines of code.

REZAGO — published desktop game · *Godot 4 · GDScript · Python · Git* — Released, Oct 2026

- Took a product from idea to launch on itch.io: design, programming, interface, saving and settings, with frequent user testing between versions.
- Moved all text into data files and localized it into 8 languages; Python scripts package the Windows and Mac builds and publish them with the itch.io CLI.
- Launched with no budget; first week: 18,000+ social media views, 33 downloads and a 5-star rating; integration with the Discord API (Rich Presence).

Floor, Sir? — 3D game · *Godot 4.6* — In development

- Logic separated from the interface and covered by 219 automated tests; content defined in JSON, plus internal tools for debugging and data auditing.

EXPERIENCE

Internship — HubLab · company project lab — Mar – May 2026

- Built the meeting-minutes module of the HubLab ecosystem: Google Apps Script backend connected to Google Sheets (national ID and PIN access, topic board with checklists and comments with mentions, filterable history; ~13,000 lines) and a responsive Bootstrap and JavaScript frontend.
- Resolved issues and requests across the ecosystem, reported by users and by the client.
- When my teammates' internships ended, I took over project leadership (Data Control Lead): ran meetings, delegated tasks, documented the ecosystem and onboarded new members until handing over the role.

Administration and HR internships · 3 companies in different industries — Jun 2018 – Dec 2019

- Inventory management in Excel (formulas, pivot tables), administrative databases and digital records.

SKILLS

Web	JavaScript · HTML/CSS · Bootstrap · Google Apps Script · responsive design
Languages	JavaScript · Python · C# · GDScript · SQL
Data	Google Sheets as a database · SQL · Power BI · Excel
Tools	Git and GitHub · automated testing · VirtualBox · automation scripts
AI	Claude Code (programming), ChatGPT and Gemini (research), with my own review and testing
Soft skills	Problem solving · self-directed learning · team leadership · attention to detail

EDUCATION AND LANGUAGES

INACAP — Higher-Level Technician, Programmer Analyst — Graduated, 2026

INACAP — Innovation and Entrepreneurship (I+E): MVP for real users in interdisciplinary teams — 2024 – 2025

Colegio Técnico Profesional República Argentina — Technician in Administration, HR specialization — Graduated, 2020

Languages: Spanish (native) · English (intermediate) · Portuguese (intermediate)
