PROFILE

Programmer analyst (INACAP) trained in SQL, Python, Power BI and Excel. During my internship at HubLab I built a data module and led Data Control, coordinating the team and resolving requests from users and the client. I focus on organizing information, automating tasks and turning data into clear reports for decision-making; I also automate processes with Python in my personal projects.

EXPERIENCE

Internship — HubLab · company project lab — Mar – May 2026

- Built the meeting-minutes module: Google Apps Script backend connected to Google Sheets (national ID and PIN access, topic board with checklists and comments with mentions, filterable history; ~13,000 lines) and a responsive Bootstrap and JavaScript frontend.
- Resolved issues and requests across the ecosystem, reported by users and by the client.
- Led Data Control, the team that coordinated the lab's layers: monitored how the ecosystem ran, scheduled and followed the meetings of every cell and layer, tracked bug reports, opened and closed cells, evaluated internships and, at the end, trained the next leaders and left them documentation of the ecosystem and a guide to the role.

Administration and HR internships · 3 companies in different industries — Jun 2018 – Dec 2019

- Completed Administration Technician internships (HR specialization) at three companies, including the final internship for my degree; managed inventory in Excel (formulas, pivot tables), administrative databases and digital records.

PROJECTS

FitTracker — training and nutrition web app · *React · TypeScript · Node.js · PostgreSQL* — Live, in daily personal use

- Designed the data model first across 9 Google Sheets and then in PostgreSQL (Neon) with versioned migrations; migrated my real data from the spreadsheet with a script that normalizes versions and exercise names (244 sets) and can be re-run without duplicating.
- Built custom reports and visualizations (weekly volume, muscle groups, weight trend, consistency and a history with filters resolved in SQL) and cut the time to save a set from 0.84 to 0.18 s by combining queries into a CTE.

REZAGO — published video game · *Godot 4 · Python* — Released, Oct 2026

- Measured the launch with itch.io and social media analytics; first week: 18,000+ views, 130 page visits and 33 downloads (25 % visit-to-download conversion).
- Organized the content in data files for 8 languages and wrote Python scripts that audit that data and automate packaging for each release.

SKILLS

Data	SQL · PostgreSQL · Power BI · Excel (formulas, pivot tables) · Google Sheets as a database
Languages	Python · SQL · TypeScript · JavaScript · C#
Web	React · Node.js · HTML/CSS · Google Apps Script · Bootstrap
IT support	Issue resolution · documentation · user training · VirtualBox · Git
AI	Claude Code, ChatGPT and Gemini as assistants, with my own review
Soft skills	Problem solving · self-directed learning · team leadership · attention to detail

EDUCATION AND LANGUAGES

INACAP — Higher-Level Technician, Programmer Analyst — Graduated, 2026
INACAP — Innovation and Entrepreneurship (I+E): MVP for real users in interdisciplinary teams — 2024 – 2025
Colegio Técnico Profesional República Argentina — Technician in Administration, HR specialization — Graduated, 2020

Languages: Spanish (native) · English (intermediate) · Portuguese (intermediate)
