PROFILE

Programmer analyst (INACAP) and independent developer (bandioh games). I designed, programmed and shipped **REZAGO**, a narrative deduction game made in Godot 4, available in 8 languages for Windows and Mac, and I am developing **Floor, Sir?**, a first-person 3D game with a branching story and 264 automated tests. I work with frequent playtests, data-driven design and AI-assisted programming (Claude Code), while I direct the design, writing and art.

PROJECTS

REZAGO — narrative deduction game · *Godot 4 · GDScript · Python* — Released, Oct 2026

- Designed, wrote and shipped a 1.5–2 h game (3–4 h for 100 %): 5 nights, 20+ letters with hidden clues, 3 endings and a deduction system that cross-checks each letter against a map and a notebook.
- Localized the game into 8 languages with all text stored in data files; Windows and Mac (beta) builds with automated Python packaging and butler releases.
- Implemented saving, achievements, settings, Discord Rich Presence and a real-time magnifier that reveals UV ink; art direction (free assets and code-generated art) and synthesized radio music.
- Iterated through frequent full-playthrough playtests (one in English with ~35 notes), prioritizing bugs, improvements and design decisions between sessions.
- Launched with no budget and my own outreach; first week: 18,000+ views (a TikTok with 7,300 and an r/chilegames post with 8,800 and 95 upvotes), 33 downloads and a 5-star rating.

Floor, Sir? — first-person 3D · *Godot 4.6 · GDScript* — In development

- Elevator operator in a 1928 hotel with a PS1 look: 7 shifts, choices that change the world, passengers at risk depending on how you drive and 8 endings.
- Separated the logic (elevator, shifts, dialogue, save data) from the scenes and covered it with 264 headless automated tests; dialogue and shifts defined in JSON.
- Built internal debugging tools: jump to any shift, a flag editor and an auditor that flags story choices with no consequences.

En Vivo — 2–4 player co-op · *Godot* — Prototype

- My first 3D prototype: a 90s TV show that goes on air no matter what. Online multiplayer (authoritative server), object physics and a phone with a Verlet-simulated cord; I showed it by streaming my gameplay on Discord and it went on hold before online testing.

Other — 2023 – present

- 2D platformers in Unity and C# with my own Aseprite sprites and animation · FitTracker, a training web app (React, TypeScript, Node and PostgreSQL), live and in daily use.

EXPERIENCE

Internship — HubLab · company project lab — Mar – May 2026

- Built the meeting-minutes module of the ecosystem (Google Apps Script, Google Sheets, Bootstrap) and fixed issues reported by users and the client.
- Led Data Control, the team that coordinated the meetings of every cell and layer in the lab; recruited, supervised and trained the next leaders.

Pixel Art and 2D Animation · freelance — Mar 2023 – present

- Design and animation of 2D sprites for clients.

SKILLS

Engines	Godot 4 (GDScript, shaders, 2D and 3D) · Unity (C#)
Programming	GDScript · C# · Python · JavaScript · SQL · Git
Production	Playtesting · localization · automated testing · itch.io publishing (butler)
Art and audio	Aseprite · Blender (basic) · Photopea · audio editing
AI	Claude Code (programming), ChatGPT and Gemini (outreach and research), with my own review and testing

EDUCATION AND LANGUAGES

INACAP — Higher-Level Technician, Programmer Analyst — Graduated, 2026
INACAP — Innovation and Entrepreneurship (I+E): MVP for real users in interdisciplinary teams — 2024 – 2025
Colegio Técnico Profesional República Argentina — Technician in Administration, HR specialization — Graduated, 2020
